eCOMMERCE MARKETPLACE INTEGRATION

MP360 is a comprehensive toolkit and service package that will have you connected with online marketplaces in record time! MP360 enables the integration and synchronization of IBM i based ERP solutions with a variety of marketplace services and connection to the leading e-commerce marketplaces. MP360 integrations include automatic Order Import, Update of Inventory Levels, Pricing Updates, Refund Processing, Shipment Tracking, Email Notifications and more.

With MP360, we help IBM i IT departments faced with the daunting task of connecting marketplaces with your backend IBM i based ERP systems a far easier task. What's more, we'll support you through the integration and after for as long as we're needed.

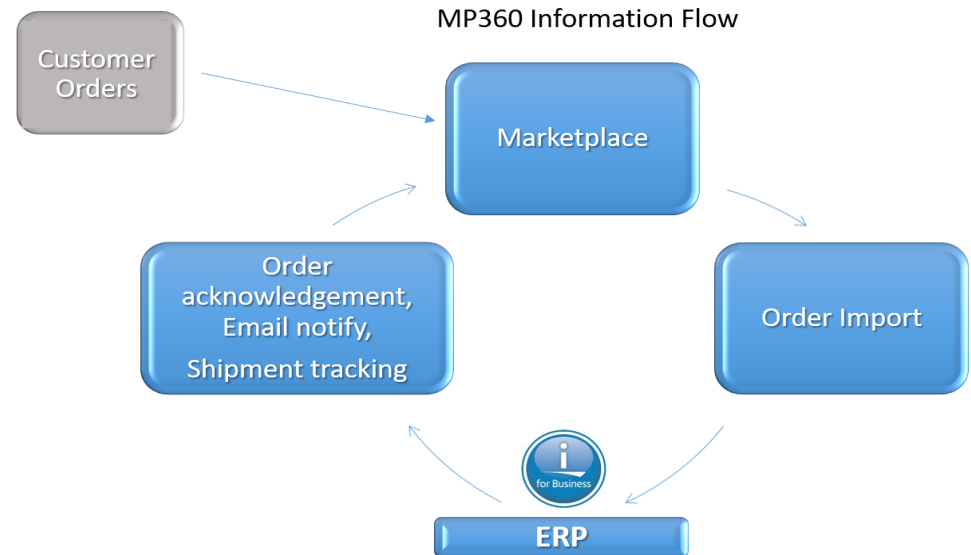

MP360°

MP360 supports the near real-time flow and exchange of data to and from the supported marketplace. You can choose to start with any one of the supported marketplaces such as Amazon/PRIME, eBay, Walmart, Jet and expand as you desire. Contact us if you need to connect with other marketplaces.

Supported integration points include;

- **Order Imports** - download orders on an ongoing basis at a frequency that best suits your environment. Orders are downloaded with automatic import directly to your ERP.
- **Shipment Tracking** – automatically upload ship tracking information to marketplaces to keep customers up to date on their order and satisfy site requirements.
- **Email notifications** - automatically notify your customers directly of order status and order tracking information directly from your IBM i based email system.
- **Inventory Levels** - update inventory to marketplaces directly from your ERP.
- **Payment & Refund Processing** – handle financial transaction processing without human intervention.

Price Watcher (coming soon)

When working with marketplaces you need to continually watch and update pricing to maintain a competitive advantage. MP360's Price Watcher provides your team with a powerful tool to maintain, automatically update, monitor and analyze marketplace pricing.

You set the frequency of price data extracts from the marketplaces, so you are always sure to have the most current information. With Amazon for example, Price Watcher monitors all competitors of your product. Algorithms keep you profitable by monitoring the price range you set along with the price changes your competitors are making. It can win the buy box. And it even offers controls to set pricing in compliance with MAP (minimum advertised pricing) guidelines or allow you to flag particular items for manual monitoring. You can choose and change these rules flexibly by product as often as you like, but the power in Price Watcher is to let the system do the work for you with ongoing monitoring and updates. Price Watcher keeps an eye on your price and your profit.
